

FLEX EDGING

Flex Edging is a flexible PVC border designed to separate flower beds in gardens. Due to its carefully thought-out design and height of 40 mm, it is ideal for separating artificial or natural grass and decorative aggregates, flower beds, pavers...

It is made of durable PVC, with anti-UV treatment. The design of its base makes it very stable, so no digging is necessary to install it; it can be placed directly on top of the geotextile or weed control fabric, which makes installation work much easier and reduces costs.

Its design enables you to produce straight or curved lines, and even circles with ease, allowing you to adapt it to different types of garden.

Flex Edging provides a clean and professional finish in an easy and effective way.

DATA SHEET

MATERIAL	Recycled PVC material (high quality)	Anti-UV treated
MEASUREMENTS	Length 227 cm Height 4 cm. Base: 5.2 cm	
COLOURS	Dark grey and white	
WEIGHT	1,33 kg	
ACCESSORIES	4 nails plus coupler for each edging piece.	Possibility of additional nails
PACKAGING	Box with 14 edging pieces and 234 x 16 x 11 cm accessories. 23.00 kg	

EDGING PLACEMENT

The edging pieces are presented on the ground. If you want to make curves, cut as many joints between the tongues as necessary to free the edging and to be able to shape it, and then secure it to the ground with the nails provided. If instead of smooth curves you need to make right angles, the area to be folded can be slightly heated with a heat gun to shape it.

The edging pieces are joined by inserting a metal piece between them that is hidden and which achieves an impeccable finish. Once placed, fill the areas with the desired material.

QUALITY COMMITMENT

Edgeering products are manufactured in Europe, respecting the environment and the human rights of workers. Edgeering guarantees that the product will not break or deteriorate provided it is installed according to the recommendations included in this data sheet and used for its intended purpose.
