

## STRAIGHT CORTEN STEEL EDGING

Straight corten steel edging allows you to follow the latest trends in defining spaces, separate materials, finish decking and prevent lawn or gravel from invading paths.

Our corten steel edging is 3 mm thick, and therefore stronger than most corten steel edging on the market. Thanks to its robustness and anchor stake design, it can be placed without burying, giving you height in the garden to create prominent areas, steps or raised flower beds. Its rear connection system leaves the exposed face with a completely clean finish; due to its robustness, you can create curves without the joints opening.

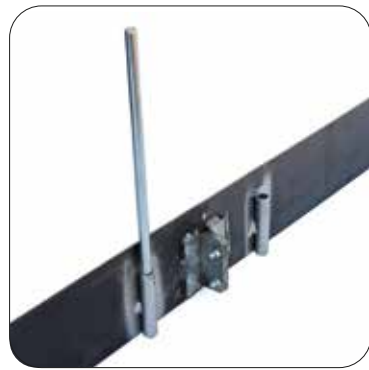

### DATA SHEET

<b>MATERIAL</b>	Corten steel
<b>MEASUREMENTS</b>	Length 200 cm Height 10 cm. Thickness 3 mm
<b>COLOUR</b>	Rust brown
<b>PESO</b>	5 kg
<b>ACCESORIOS</b>	3 nails plus coupler (possibility of additional nails)

## EDGING PLACEMENT

Straight corten steel edging, due to the robustness of both the edging and the anchor stakes, can be placed without burying, giving you height in the garden to create prominent areas, steps or raised flower beds.

Its rear screw connection system leaves the exposed face with a completely clean and continuous finish. The 3 mm thick sheet used gives it robustness, but at the same time also allows some flexion to produce a curved design.

## QUALITY COMMITMENT

Edgeering products are manufactured in Europe, respecting the environment and the human rights of workers. Edgeering guarantees that the product will not break or deteriorate provided it is installed according to the recommendations included in this data sheet and used for its intended purpose.
